

where you can sense the difference or the time or the space ?
there is no time...no space...no distance
to measure distance you need a certain object
you need light...something to measure the distance
you need two objects and now you can measure the distance
when there is no objectivity within the space...
it can be one millimetre...
it can be a thousand miles...
there is no sense of distance...
there is no time...
for time you need to measure movement
anything changing in time
time needs a certain movement to measure
there is no sense of time because there is no way to measure
there is no space...no light to gauge...
it is a very strange phenomenon
when you fall into it you do not know the size of it...
you do not know how big it is...
but it is as vast as the universe
because the black hole has no boundary either
the moment you fall into this black hole it is shocking
everything around you...outside you...starts exploding into light...
you see all forms of light
because now you have fallen into such a dark space
that even the darkness around you has become filled with light
that is why it is called the black hole
no light can enter in it...it is perfectly dark...
if any light enters soon it will develop matter...
and the whole world will come in
perhaps that is the big bang
the big bang is nothing but a black hole exploding...
emptiness exploding...
it creates matter

suddenly matter enters into this life source
and the universe is created
it has happened in the nuclear bomb
the nuclear bomb is nothing but separating the electron and the proton
the moment you separate electron and proton the nucleus explodes
it is the same in existence
existence has so many floating black holes
that if many black holes gather
it can create enough force to explode one black hole
that perhaps is the way the origins of life came
from emptiness and explosion and the light filtered in...
created matter...and here we are
it is very difficult to explain this
but i can understand the inner experience of this
all that i am speaking is from the view of the mystical
i know what i am speaking from the inner
i have died
i have gone into the black hole
i have seen the universe in a totally different light
trying to translate it into the world is a little complex
but it is not a complicated experience
the moment you will fall in the black hole
everything will be light
and in such a dimension that it cannot be explained
all the senses that you are using are so small and isolated
even the sixth sense within the body is far more intricate
than the first five senses
the sixth sense combines all the five senses
and does not only become the sixth sense
it becomes the sixth plus the fifth...
sixth plus the fourth...sixth plus the third...
you understand ?
all your senses become multiplied...multidimensional
